

## Artificial Intelligence (AI) / Machine Learning (ML) Engagement Overview

### About Valere

Valere is an award-winning, AI and Software Development Leader, helping companies of all sizes realize their digital potential. Valere provides a best-of-both-worlds approach with U.S.-based oversight, discovery and design, fully integrated with 200+ in-house technical experts and resources across five offices worldwide.

### Engagement Paths

### Engagement Overview

Our engagement paths offer two distinct approaches to integrating AI into your operations. The first path is a Proof of Concept (POC), a swift and cost-efficient initial step tailored to your needs, setting the stage for a long-term partnership. Valere's iterative discovery process will refine the objective acceptance criteria and scope, with detailed engineering work to follow. The second path is an AI Assessment and Planning phase, a deep dive into your operations to identify immediate and systematic opportunities for AI integration. Through workshops and audits, we'll pinpoint high-value areas for AI implementation in your organization, providing concrete recommendations and initial use cases.

Following Path 1 or 2, Valere will conduct a thorough Discovery, aligning technical expertise, business and functional requirements, user experience strategy, and user interface design to your intended future state. Next, in the Design phase, Valere transitions from conceptualization to creation, focusing on user interface and visual design, culminating in a clickable prototype and Style Guide to ensure a smooth and efficient Development phase. During the Development phase your technical team will build and deploy all system components, specified to defined requirements and designs. Throughout the Deployment and Integration phase, Valere will ensure robust, scalable solutions with clear, testable code, supported by documentation. In the Refinement and Maintenance phase, user feedback guides iterative improvements while we ensure longevity and relevance through routine checks, security updates, and continuous enhancements.

### Engagement Services & Offerings

Valere's AI and ML expertise includes but is not limited to:

- AI Strategy & Design
- AI Systems Engineering
- AI & ML Operations
- ML & Deep Learning
- Data Science & Advanced Analytics
- Large Language Models (LLM)
- Generative AI (GenAI)
- GenAI Organizational Knowledge Base
- AI Digital Transformation
